3.1 Habitat types present on the site and assessment for them

Annex I Habitat types						Site assessment			
Code	PF	NP	Cover [ha]	Cave [number]	Data quality	A B C D	A B C		
						Representativity	Relative Surface	Conservation	Global
5210			0.54			D			
6110			0.02			D			
6210			66.0			B	C	B	B
6220			3.0			C	C	B	B
91AA			27.6			B	C	B	B

9260			7.8			C	C	B	B
92A0			6.0			A	C	B	B
9340			435.0			B	C	B	B

PF: for the habitat types that can have a non-priority as well as a priority form (6210, 7130, 9430) enter "X" in the column PF to indicate the priority form.

NP: in case that a habitat type no longer exists in the site enter: x (optional)

Cover: decimal values can be entered

Caves: for habitat types 8310, 8330 (caves) enter the number of caves if estimated surface is not available.

Data quality: G = 'Good' (e.g. based on surveys); M = 'Moderate' (e.g. based on partial data with some extrapolation); P = 'Poor' (e.g. rough estimation)

Group: A = Amphibians, B = Birds, F = Fish, I = Invertebrates, M = Mammals, P = Plants, R = Reptiles

S: in case that the data on species are sensitive and therefore have to be blocked for any public access enter: yes

NP: in case that a species is no longer present in the site enter: x (optional)

Type: p = permanent, r = reproducing, c = concentration, w = wintering (for plant and non-migratory species use permanent)

Unit: i = individuals, p = pairs or other units according to the Standard list of population units and codes in accordance with Article 12 and 17 reporting (see [reference portal](#))

Abundance categories (Cat.): C = common, R = rare, V = very rare, P = present - to fill if data are deficient (DD) or in addition to population size information

Data quality: G = 'Good' (e.g. based on surveys); M = 'Moderate' (e.g. based on partial data with some extrapolation); P = 'Poor' (e.g. rough estimation); VP = 'Very poor' (use this category only, if not even a rough estimation of the population size can be made, in this case the fields for population size can remain empty, but the field "Abundance categories" has to be filled in)

3.3 Other important species of flora and fauna (optional)

Other Site Characteristics

Area collinare di natura marnoso-arenacea e calcarea solcata del Torrente Nese. E' caratterizzata da boschi del Quercion ilicis (9340), da boschi misti di Quercus cerris e Ostrya carpinifolia, dell'Aceri obtusati-Quercetum cerris, ma anche da pascoli dell'Asperulo purpureae-Brometum erecti (6210) e da nuclei cedui a Quercus pubescens (91H0). Lungo il Nese è presente una vegetazione ripariale riferibile al Salicetum albae (92A0).

4.2 Quality and importance

Valle con bassa antropizzazione e presenza di un buon numero di fitocenosi in rapporto alla superficie del sito. In particolare i boschi di Quercus ilex costituiscono un interessante esempio di vegetazione mista fra sclerofille sempreverdi e caducifoglie che, da un punto di vista biogeografico, rappresenta la transizione tra la vegetazione mediterranea del Quercion ilicis e quella delle aree collinari interne del Laburno-Ostryon. Tra la fauna da segnalare anche Buteo buteo e Falco tinnunculus (poco comuni).
