N23	10.0
N21	3.0
N08	2.0
N10	1.0
N09	4.0
N18	50.0
Total Habitat Cover	100

Other Site Characteristics

Rilievo calcareo dove, oltre agli habitat segnalati con codice ed attribuiti al Quercetalia pubesceti-petraeae (9260) ed all'Orno-Quercetum ilicis (9340), si rinvencono boschi di Quercus cerris con Quercus petraea e Carpinus betulus, sui versanti ombrosi; cenosi di Quercus cerris, con un sottobosco di sclerofille sempreverdi, nei versanti più soleggiate, attribuite all'Erico scopariae-Quercetum cerridis; cedui di ostrya carpinifolia, dello Scutellario-Ostryetum. Nelle radure sono diffusi arbusteti a Juniperus oxycedrus (5211), Calluna vulgaris, od a Sarothamnium scoparius e Pteridium aquilinum.

4.2 Quality and importance

L'aspetto saliente del sito è dato dal poter essere considerato come punto d'incrocio di diverse influenze bioclimatiche. Le leccete, che rivestono il versante meridionale, rappresentano infatti un esempio di vegetazione mista di sclerofille sempreverdi e caducifoglie, che testimonia la transizione fra la vegetazione del Quercion ilicis e quella del Quercion pubescenti-petraeae. Analogamente le cerrete più termofile dell'Erico-Quercetum cerris, costituiscono uno dei punti più interni ed orientali dell'associazione; mentre, sui versanti settentrionali sono presenti boschi dello Scutellario-Ostryetum, prossimi al limite orientale di distribuzione appenninica. Tra le entità floristiche, oltre alle specie endemiche, sono state segnalate Dracunculus vulgaris, Ulex europaeus e Genista germanica poichè rare a livello regionale; Calluna vulgaris, in quanto di particolare interesse fitogeografico. Tra la fauna da segnalare anche Buteo buteo, Falco tinnunculus, Sylvia melanocephala (specie poco comuni).

4.4 Ownership (optional)

Type	[%]	
Public	National/Federal	0
	State/Province	0
